

REKAM NUSANTARA FOUNDATION

impact report

*Documenting Knowledge,
Preserving Life*

Foreword

Indonesia is home to one of the world's richest concentrations of biodiversity. At the same time, millions of people have developed close relationship with land and sea for generations. Within this beautiful landscape fraught with challenges, we work to conserve the natural heritage, support its people, and document their stories.

Over the past year, our organization has continued to grow not just in scale, but in clarity of purpose. Throughout our journey, we have learned that effective conservation requires reliable knowledge, credible data, and strong partnerships. It needs connecting research with communities, technology with field realities, and local experience with policy processes.

This commitment is reflected in our new mission statement:
"Documenting Knowledge, Preserving Life."

Therefore, It is with great pride that I present Rekam Nusantara Foundation's 2025 Impact Report. I am proud of the dedication of our team and grateful for the trust of our partners, communities, and supporters. We remain committed to ensuring that the knowledge we generate and document contributes to tangible, long-term impact for Indonesia's people and its natural ecosystems.

With heartfelt gratitude,

Irfan Yulianto

The Chairperson, Rekam Nusantara Foundation

**KEY
STRATEGIES**

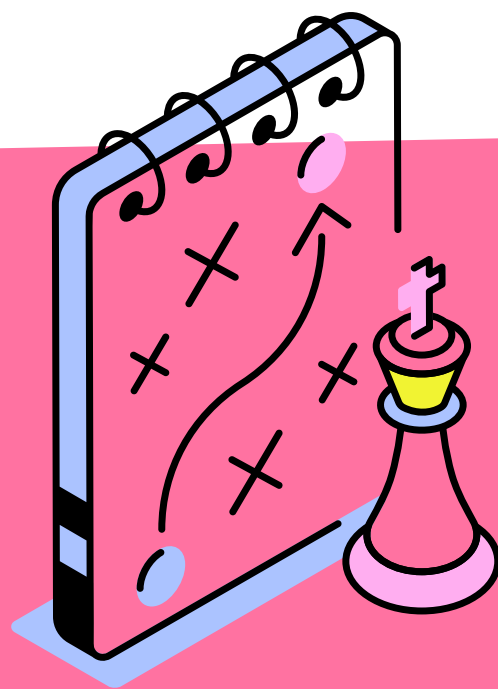

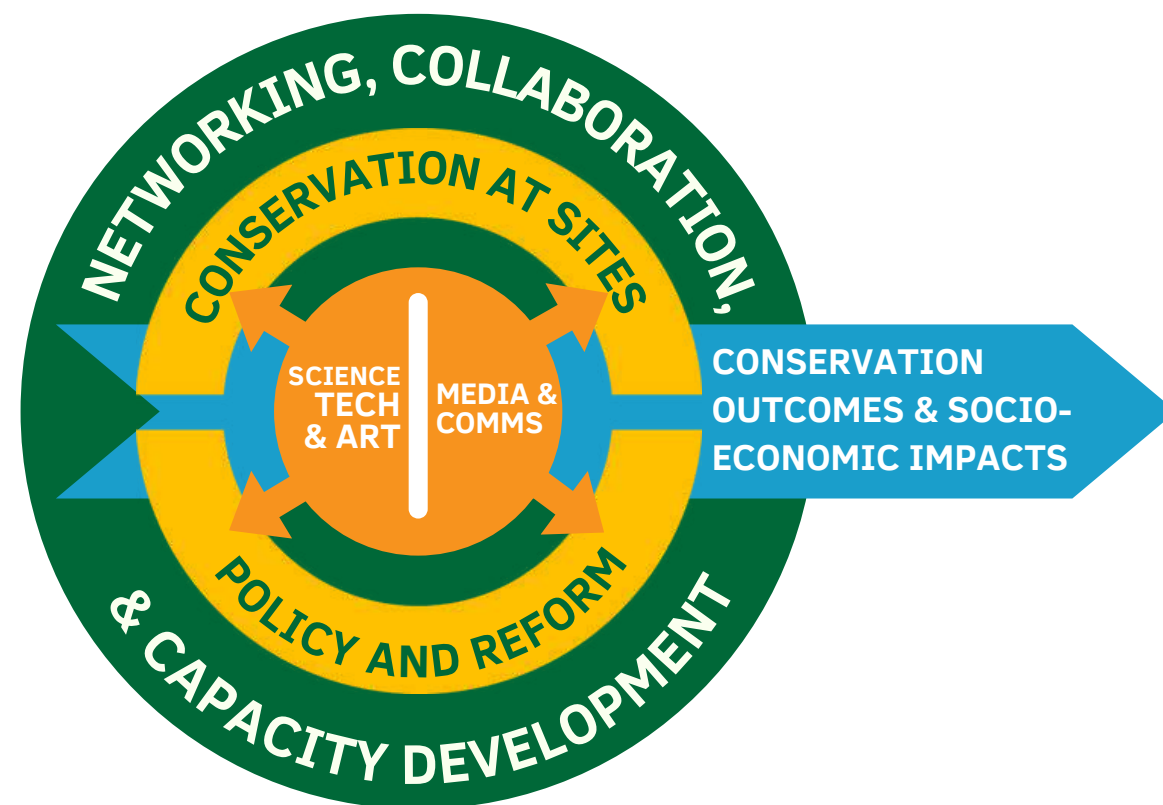

**CORE
STRENGTHS**

ACTIONS

OUTCOMES

We recognize the need to integrate scientific knowledge, technology, local wisdom, and creative communication to drive conservation efforts that create meaningful, lasting benefits for both nature and society.

Intro

Rekam Nusantara Foundation is an NGO dedicated to advancing Indonesia's biodiversity through innovative research and conservation. Since 2013, we have collaborated with various stakeholders, including ministries, local governments, private sectors and national and international NGOs. Our mission is to foster understanding of sustainability, cultural preservation, natural resource management, indigenous rights, and climate change. We engage the public through creative communication to promote Indonesia's natural heritage and conservation efforts.

Documenting Knowledge Preserving Life

VISION

Capturing and preserving the extraordinary natural heritage of the archipelago to inspire collective awareness and action for environmental sustainability and a better future of Indonesia.

MISSION

Integrating art, science and traditional wisdom to achieve environmental sustainability and human well-being across the Indonesian archipelago.

Forest

Our Forest Program focuses on protecting Indonesia's biodiversity through a holistic approach that integrates species conservation, ecosystem preservation, and community empowerment.

HIGHLIGHTS: In 2025, we strengthen landscape-based conservation efforts to safeguard critical forest ecosystems and support sustainable forest-dependent communities in Kalimantan. We also advance the Papua Campaign through strategic digital communication by elevating the role of Indigenous Peoples and Local Communities (IPLC), scaling up community-led initiatives, and fostering multi-stakeholder collaboration for forest conservation.

14

Scientific presentations at national and international forums

Engaging

6

Students from 4 academic institutions

Support for Rimba III Festival ("Seput Menua") in Sungai Utik

ACHIEVEMENT

Awarded a **Conservation Leadership Programme (CLP) Award** for a hornbill conservation initiative based on local wisdom in Kalimantan

Secured international equipment support:

- IdeaWild (smartphone and digital camera)
- Global Messenger, in collaboration with IdOU (2 radio transmitters)
- Optisan (7 binoculars)

OUTCOMES

Strengthened recognition of **Indigenous Peoples as primary forest stewards**.

Reduced potential for **inter-community boundary conflicts** following boundary demarcation.

Improved **community capacity** in:

- Hornbill monitoring
- Customary forest management
- Community-based ecotourism

Biodiversity data are utilized as a **baseline for Indigenous Forest management planning**.

Increased **visibility of hornbills as key species for forest conservation**.

Reinforced **positioning of Rangkong Indonesia as a facilitator and knowledge broker** in community-based conservation.

Focused on conserving **Indonesia's 13 hornbill species** and their habitat in **98 million hectares** of tropical rainforests, we have been collaborating with **Indigenous Peoples and Local Communities (IPLCs)** to leverage their knowledge and support sustainable conservation practices that benefit both wildlife and the local people.

GOALS

To raise public awareness of hornbills and their forest habitats while amplifying field-based conservation efforts led by Rangkong Indonesia and local communities as frontline guardians.

OUTCOMES

- ✓ **Expanded public awareness** of hornbills and forest habitats, as reflected in the significant increase in reach and video views across platforms.
- ✓ **Stronger audience engagement and interest**, indicated by higher content interactions and profile visits on both Instagram and Facebook.
- ✓ **Improved visibility and positioning of Rangkong Indonesia** as a trusted source of information on hornbill conservation and community-led field efforts.
- ✓ **Greater amplification of local conservation narratives**, highlighting the role of local communities as frontline guardians of forests and hornbills.

**Protection of Hornbill Habitat
Through Strengthening
Customary Forest Management**

OUTCOMES

Increased global awareness of hornbill conservation across Asia and Africa, particularly on habitat protection and threats from wildlife trade and captivity.

Stronger audience engagement and interest, shown by higher interactions and profile visits across social media platforms.

Enhanced visibility of IUCN Hornbills, reflected in audience growth and expanded reach among international followers.

Ocean

Our Ocean program focuses on bridging the data and policy nexus which supports both sustainable environmental management and economic development.

HIGHLIGHTS: In 2025, we strengthened our focus in **nature-based solutions for advancing costal resilience** to climate change. We are also committed to mainstream and implement **Gender Equality, Disability, and Social Inclusion (GEDSI)** in all of our projects.

Where We Work

SUSTAINABLE FISHERIES MANAGEMENT

FRCI's Sustainable Fisheries Program promotes science-based management of Indonesia's small-scale fisheries by integrating research, technology, and local knowledge. The program informs policy development, raises public awareness, and facilitates stakeholder engagement. Through these efforts, it strengthens fisheries governance, supports long-term resource sustainability, and enhances the socio-economic resilience of coastal communities.

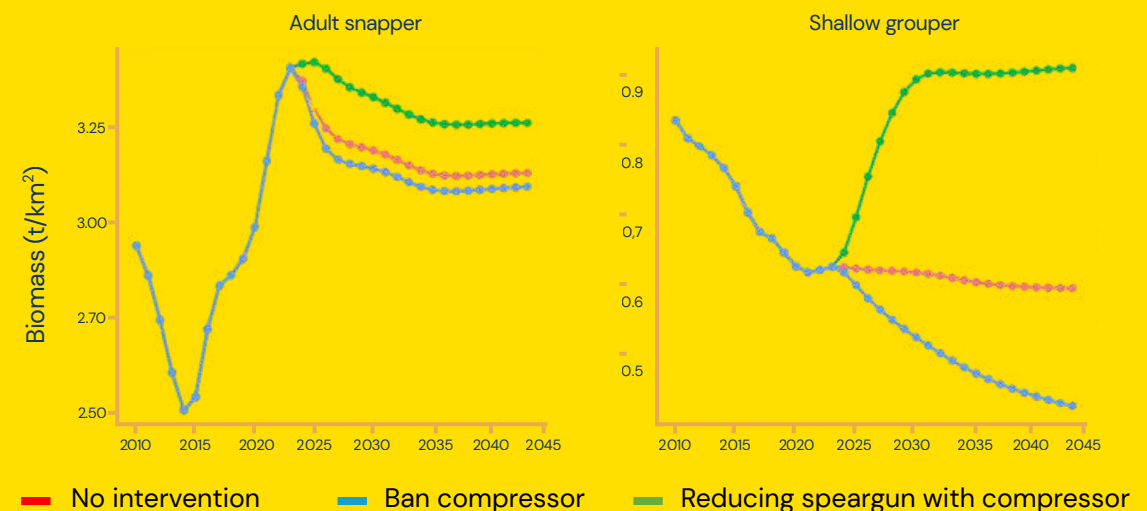

ECOSYSTEM-BASED FISHERIES MANAGEMENT

To implement Ecosystem-Based Fisheries Management (EBFM) in Saleh Bay, ecosystem indicators were integrated with policy through the application of an **Ecopath with Ecosim (EwE) model**. The model facilitates **scenario analysis, enabling decision-makers to balance fisheries utilization with ecosystem sustainability**. This initiative strengthened local capacity in ecosystem modeling, enhanced dialogue between scientific and policy communities, and generated empirical evidence to support sustainable management practices. The model now serves as a scientific foundation for EBFM, contributing to the long-term health of the ecosystem and the viability of coastal fisheries.

WHAT WE DO:

- Held a training workshop to **improve the capacity related to EwE and EBFM**
- **Develop the structure and collate data sets** for an (EwE) model
- **Held stakeholder meetings** at the provincial and national levels.

Fish biomass projection from EwE model

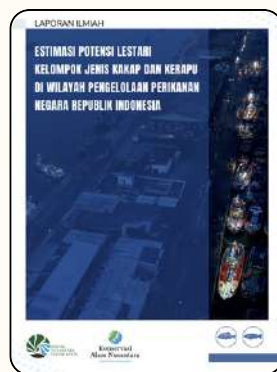

NATIONAL SNAPPER-GROUPER INITIATIVE

In collaboration with YKAN, we conducted stock assessments for snapper and grouper as part of our role as a Scientific Service Provider (SSP) supporting the National Commission on Fish Stock Assessment (KOMNAS KAJISKAN). This initiative strengthened Indonesia's national fisheries science system by delivering a study of stock assessments across 11 Fisheries Management Areas in Indonesia, strengthening the national scientific evidence base for fisheries management.

This Scientific Report supports evidence-based decision-making for the long-term sustainability of these fisheries.

Output

Scientific Report:
Estimation of the Sustainable Potential of Snapper and Grouper in FMAs

STOCK ASSESSMENT

Providing fish stock status information to strengthen science-based and sustainable fisheries management.

Study Report

Stock status of blue swimming crab and mud crab in Demak and Jepara, Central Java

Stock status of Blue Swimming Crab and Rabbitfish in Saleh Bay, West Nusa Tenggara

Estimation of Sustainable Potential and Stock Status Based on Surplus Production Model for Pelagic Fish Resources in FMA 572

Stock Status of Pelagic Fish Resources in FMA 572 Based on Length-Based Stock Assessment

Stock Status of Reef Fish in Liukang Tangaya MPA, Pangkajene Kepulauan, South Sulawesi

IUU Fishing

To strengthen Indonesia's response to Illegal, Unreported, and Unregulated (IUU) Fishing, the program supports capacity building through trainings and workshops, and facilitates the development of national policies and guidelines. It also provides expert assistance in digital forensic analysis for IUU cases and conducts outreach and publications to enhance understanding and implementation at national and sub-national levels. These efforts contribute to more effective enforcement, stronger institutions, and sustainable fisheries governance.

MARINE PROTECTED AREA (MPA) MANAGEMENT

In FRCI's MPA Program, we support the national and local government to strengthen the effective, adaptive, and sustainable management of marine conservation areas to benefit ecosystems and communities.

MPA and OECM Vision 2045

Indonesia aims to expand the coverage of MPAs to 30% of the total marine area, or at least 97.5 million hectares, and manage it effectively by 2045. To achieve this ambitious target, the Government of Indonesia through the Ministry of Marine Affairs and Fisheries (MMAF) has prepared the strategic document MPA & OECM Vision 2045: An Integrated Strategy Towards Sustainable and Perpetual Indonesian Seas.

OUR APPROCHES

At the national level:

- Supported MMAF in advancing the MPA & OECM Vision 2045 (30x45 target)
- Developed Offshore and Blue Carbon MPA guidelines
- Supported to the management plan of the Indonesia's first offshore MPA
- Strengthened the national conservation database system (SIDAKO)

At the site level:

- Research on fish stock, coral reef ecology, and socio-economic
- Developed MPA cost-benefit analysis
- Enhanced the capacity of managers and local communities
- Advanced alternative livelihood initiatives.

Species Conservation

SHARK AND RAYS CONSERVATION PROGRAM

As the world's largest producer of sharks and rays, Indonesia faces significant challenges including overexploitation, illegal trade, and weak management, with many species requiring strict CITES regulation. Our initiative addresses these issues by strengthening institutional capacity, improving CITES compliance, enhancing data collection for sustainable fisheries management, and engaging stakeholders to support conservation and governance.

WHAT WE DO

- Supporting shark and ray conservation and management through capacity building, research, and policy strengthening.
- Reducing illegal trade through enhanced national capacity
- Training government staff in shark identification
- Mapping the national shark and ray products trade chain

OUR ACTION

FRCI conducted a massive, nation-wide survey in the main shark-landing sites to identify the supply chain. Working along side national and local government in implementing CITES regulation, engage with fishers, traders, processors and exporters to improve the compliance.

BBNJ

Biodiversity Beyond National Jurisdiction Agreement

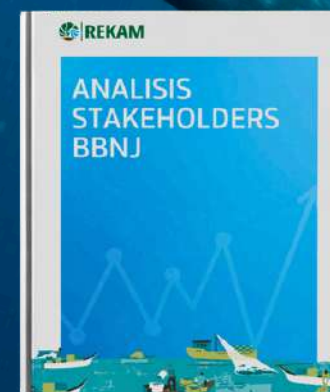

The BBNJ Agreement is a global treaty that governs the conservation and sustainable use of marine biodiversity in areas beyond national jurisdiction, also known as the high seas. In Indonesia, the Agreement was ratified through Presidential Regulation Number 67 of 2025 and is now entering the early phase of national operationalisation.

OUR ACTION

- Facilitate national-level dialogues
- Support agenda development for national consultations
- Produce strategic communication content
- Provide analytical inputs

Natural Resources Crime Unit

To support law enforcement agencies in dismantling organized wildlife crime networks through digital forensic analysis and network-based investigations.

OUTPUTS

5 Major Wildlife Crime Cases

Digital forensic and investigative support

Analysis of cross-border and domestic wildlife trafficking networks, including live animals and wildlife body parts

- **Reconstruction of criminal networks** using digital communication data, metadata, financial transactions, and logistics patterns.
- **Technical assistance to law enforcement agencies** (Gakkum, Customs, Police) across multiple **provinces and international routes**.

ACHIEVEMENT

Supported the investigation and prosecution of a cross-border wildlife smuggling case,

involving a Vietnamese-flagged cargo vessel (MV Royal O6), resulting in convictions in Indonesia.

Exposed inter-regional bird trafficking networks linking Sumatra, Java, and Banten through integrated digital forensic analysis.

Contributed to major wildlife seizures, including **165 kg of pangolin scales**, as well as rhino horn, tiger canines, bile sacs, and orangutan remains.

Strengthened law enforcement understanding of organized, multi-actor wildlife crime networks with defined roles and financial flows.

OUTCOMES

- ✓ **Improved law enforcement capacity to identify, reconstruct and dismantle organized wildlife crime networks** using digital forensic evidence.
- ✓ **Shift from case-by-case enforcement to network-based investigations**, enabling deeper insight into trafficking logistics, financing, and coordination.
- ✓ **Enhanced recognition of wildlife crime as an organized and transnational offense**, positioning digital forensics as a critical enforcement tool.

© TIM LAMAN

The Urban and Sustainability Program is a directorate that was established to assist the community and local governments in finding solutions to various environmental problems that exist in urban areas. Currently it has just started in the City of Bogor by collaborating with the Bogor City Government, the community and business actors to create waste management in residential areas and change the behavior of the people of Bogor City in managing their household waste.

Urban & Sustainability by numbers

Plastic Waste Management and Upcycling in 35 RTs:

Total waste collected

512,2 tons

Mix-waste

Processed

53,3 tons

Low-value plastic waste

The plastic waste was upcycled into boards and beams used as the main material for constructing absorption wells.

Produced

220 Units

Casting products (size 100 x 200 x 100 cm)

ACHIEVEMENT

Value of upcycled products in the circular economy

IDR **1,210,000,000**

CORE IMPACTS:

A Environmental Impact

- Reducing plastic waste ending up in landfills through upcycling-based processing.
- Promoting the use of waste as a supporting material for environmental infrastructure (absorption wells).

B Social & Institutional Impact

- Mentoring the Bantarkemang TPS3R (3 Neighborhood Associations, 13 Community Units) in waste sorting systems and waste management procedures.
- Guiding the RT 01–04 area of Kencana Village, Tanah Sareal, with support from PT SMI in the form of:
 - A land area of approximately 1,000 m²
 - Management building, hangar, maggot cultivation facilities, and sorting infrastructure.
 - Strengthening community capacity to enable independent and sustainable waste management.

We bridge science and creativity to make complex environmental issues accessible and engaging. Through storytelling, visual media, and participatory outreach, we raise public awareness and inspire meaningful involvement in conservation. Our approach fosters curiosity, builds knowledge, and encourages collective action to protect our planet's ecosystems.

"Telling Indonesia's Untold Stories". Through the lens of documentary film, INFIS amplifies the voices of nature and culture—uniting storytellers and activists to inspire public awareness and protect Indonesia's natural heritage.
